

# Crown

Do you watch The Paper Girls Show on the internet, heat up your snack in the microwave and turn on the lights at home when it gets dark? Many people do this! But they don't always remember that tablets, microwaves, lamps, showers and so many other everyday objects have something in common. They all need energy to function.

There is clean energy (green energy) and dirty energy. When green energy gets generated, it does not produce waste and it is renewable, such as wind and solar. Dirty energy, on the other hand, is produced by removing non-renewable materials from nature, such as oil and coal. Its exploitation causes damage to the environment, that is, by solving the problem of producing energy, it creates a new problem. As intelligence is the ability to solve or, especially, avoid problems, it is much more intelligent to use green energy, as Kami and Professor Seymour tried to explain... but just tried, right?

Origami model: Traditional Text: Rita Foelker  
Created for 'The Paper Girls Show' | Episode 12: 'Trash Talk'  
Ages 6+
